Data Source: Manitoba Bureau of Statistics

June 2005

I. EXECUTIVE SUMMARY

The Manitoba Bureau of Statistics (MBS) has prepared population and demographic projections for the Aboriginal Identity population of Manitoba for the period 2001-2026. These projections are compatible with the MEDIUM level Manitoba population projections (Manitoba Population Projections 2005 to 2036, MBS 2004-8, December 2004) and the Manitoba Regional population projections (Manitoba Regions Population And Demographic Projections 2005 – 2026, MBS 2004-9, January 2005).

These projections are the second time that MBS has produced Aboriginal population projections. MBS produced the initial projections in 1997, in conjunction with Aboriginal and Northern Affairs. The 1997 projections should no longer be used.

The population projections are based on the current patterns of fertility, mortality, interprovincial and intraprovincial migration. Detailed information regarding component assumptions can be found in Section 5 of this report.

These projections cover three Aboriginal groups and three regional areas. The three Aboriginal groups were Registered Indian, Metis (non-registered) and all Other Aboriginals (non-registered). The three regions were Winnipeg and the R.M. of Headingley, the North and the South. Regional distributions were developed for all three Aboriginal groups for a total of nine Aboriginal communities. With the totals, sixteen separate projections by age group and gender for the 2001 to 2026 time period were completed.

MBS estimated the Aboriginal population of Manitoba to be 162,000 as of July 1, 2001. By 2004, the Aboriginal Identity population was projected to have increased by 10,600 or 6.6% to 172,700. MBS projects that Manitoba's Aboriginal population will increase by 50,700 persons or nearly 30.0% between 2004 and 2017. In 2017 the Aboriginal population of Manitoba is projected to be 223,400. The strong growth of the Aboriginal population is mainly due to the higher fertility rate of the population, combined with its youthful age distribution.

All Aboriginal groups are projected to have increases in population by the end of the projection period. The **Registered Indian** population is projected to increase by 20,500 persons or 42.6% over the next thirteen years to 2017. The population gain of nearly 21,000 (from 108,400 in 2004 to 145,900 in 2017) is due to a natural increase averaging 3,000 per year (i.e. 3,000 more birth than deaths per year), combined with a projected annual net migration outflow of -70 persons.

The smallest projected population percentage increase will be for the **Metis (non-registered)** community. The Metis population is projected to increase by 10,600 persons above its 2004 population of 56,500. This is a total growth rate of 18.8% over the 2004 to 2017 period. The Metis are assumed to have lower fertility rates than the Registered Indian population and as a result the growth of the Metis community is not as strong.

The **Other Aboriginal (non-registered)** population is projected to have a population increase of 2,600 (33.3%) between 2004 and 2017. This is the second highest percentage increase among the three Aboriginal groups. Since it is a small sub-group of the overall Aboriginal population, its effect is limited. This population totalled 7,800 in 2004 and is projected to be 10,400 in 2017.

The Aboriginal population for the **Winnipeg** region is projected to grow by 33.4% (up 19,500 persons) between 2004 and 2017. The Aboriginal population of Winnipeg is projected to be 77,900 in 2017 and comprise 10.6% of the total population. In 2004 the Aboriginal population was estimated to be 58,400 or 9.0% of the total Winnipeg population.

The population of the **North** is projected to increase by 16.2% (up 10,700 persons), from 66,200 in 2004 to 76,900 in 2017. By 2017, it is projected that nearly 85% of Northerners will identify as Aboriginal. However, when compared to the other regions the northern population is not growing as quickly. The slower growth rate is due to a projected net migration loss as more Aboriginals are expected to move away from the North than move to the region.

The **South** will have the largest projected population percentage increase at 42.6% (up 20,500 persons over the 2004 population of 48,100). The South is expected to record positive net migration throughout the projection period and as a result strong population growth. It was estimated that 11.1% of the Southern population was Aboriginal in 2004. This share is projected to increase by 3.3 percentage points to 14.4% by 2017.

The following charts highlight some of the projected impacts for the 2001 to 2004 and 2004 to 2017 periods. The projected impacts include:

- The Aboriginal community is growing faster than the non-Aboriginal population. From 2004 to 2017 the total Aboriginal growth rate is projected to be 29.4% compared to 8.3% for the non-Aboriginal community. On an annual average basis, this is 2.0% growth per year.

- The Registered Indian community is the fastest growing at 34.6% for the 2004 to 2017 period or 2.3% annually. The Metis growth rate is 18.8% for an average annual growth rate of 1.3%.

- The 29.4% growth will be sharpest in the South, with an increase of 42.6% for the next 13 years. Winnipeg's increase is 33.5% while the North is 16.2%.

- The Aboriginal community is considerably younger than the non-Aboriginal community. Aboriginals will account for nearly three out of every ten children aged 0 to 14 in 2017, that's up from nearly one in four in 2001.

- While the Aboriginal community is considerably younger than the non-Aboriginal community, the fastest growing component of the Aboriginal population is those 65 and over. Between 2004 and 2017, the 65 and older population will increase by 90.3% compared to 18.8% for 0 to 14 year-olds.

MAN 1415

II. INTRODUCTION

This report presents population projections and demographic components for three Aboriginal groups in each of three Manitoba regions during the period July 1, 2001 – June 30, 2026.

Manitoban's identifying as Aboriginal in the 2001 Census formed the base population for these projections and included persons who reported identifying with at least one Aboriginal group, that is, 'North American Indian', 'Métis' or 'Inuit (Eskimo)', and/or who reported being a Treaty Indian or a Registered Indian, as defined by the Indian Act of Canada.

The Aboriginal Identity population was then classified into the following three sub-groups:

1. Registered Indian: includes all persons who reported they were registered under the Indian Act of Canada, regardless of their identifying with an aboriginal group.
2. Metis and non-registered: includes all Metis aboriginals not registered under the Indian Act of Canada.
3. Other non-registered Aboriginals including Inuit: includes all non-Metis aboriginals not registered under the Indian Act of Canada. This includes North American Indians, Inuit, and multiple aboriginal responses.

The three regions of Manitoba employed for the projections are aggregations of the eight economic regions or the official regions for data collection (see map on facing page).

1. Winnipeg: economic region of Winnipeg
2. North: economic region of North
3. South: economic regions of Southeast, South Central, Southwest, North Central, Interlake and Parklands

Regional distributions were developed for all three Aboriginal groups for a total of nine Aboriginal communities. With the totals, sixteen separate projections by age group and gender for the 2001 to 2026 time period were developed.

It should also be noted that the base populations for each of these communities were adjusted for net Census undercoverage and unenumerated Indian Reserves. The adjustment increased the total base population by 7.6% or 11,381 persons. Detailed Information on the population adjustment can be found in the Appendix A.

Due to lack of information on intermarriage rates and trends over time, no assumption was made regarding Bill C31 reinstatements. In addition, the issue of "ethnic mobility" was not considered in these projections. Ethnic mobility refers to changing ethnic identities, either intergenerational or intragenerational. This process is difficult to model and was therefore not included in these projections. It has been estimated that approximately 50% of the growth in the Aboriginal community between 1996 and 2001 was due to ethnic mobility.

Projections are not forecasts but are based on what would occur if the stated assumptions hold true. The assumptions are based on recent trends and reflect the impact on the Aboriginal Identity population if these trends were to continue. As the process of change is cumulative, the reliability of the projections may decrease over time.

This is the second set of Aboriginal population projections by MBS. In 1997, in conjunction with Aboriginal and Northern Affairs, an initial set of projections from 1991 to 2016 was developed. These initial projections are no longer valid and should not be used.

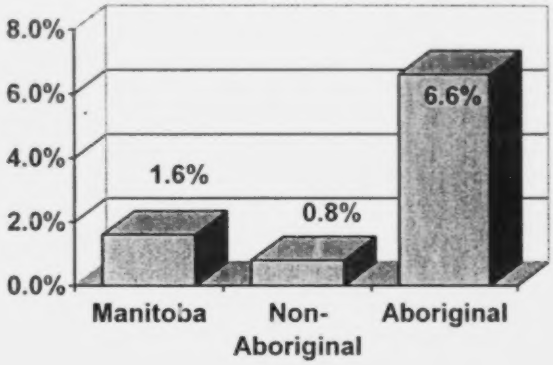
III. PROJECTED ABORIGINAL IDENTITY POPULATION

In this section of the report, the general results of the projections of Aboriginal communities in Manitoba are highlighted. In the first part a brief summary of the projected population growth between 2001 and 2004 is given. Following this, an analysis of projected growth from 2004 onwards is presented.

Projected Population Growth: 2001 to 2004

According to the Manitoba Bureau of Statistics, there were 162,000 Aboriginals living in Manitoba as of July 1, 2001. Between 2001 and 2004, the Aboriginal Identity population is estimated to have increased by 10,600 or 6.6% to 172,700. The total population of Manitoba was estimated to have increased by 1.6% over the same time period. When the projected population of 2004 is compared to the total Manitoba estimated population of 1,170,300 in 2004, Aboriginals comprised 14.8% of the population. This compares to 14.1% in 2001.

Population Growth: 2001 to 2004



As the Aboriginal population increased, it also became older due to increasing life expectancies. The median age of Aboriginals in 2004 was projected to be 23.6 years, 0.2 years older than in 2001. The median age of the non-Aboriginal population was 39.5 in 2004, nearly sixteen years older.

The strongest growth was projected to have occurred in the older age groups. From 2001 to 2004, the number of 55-64 year-olds is projected to increase by 18.8%, while 45-54 year-olds and those over 65 increased their numbers by 13.6% and 12.1% respectively. On the other hand, the projected number of 0-14 year-olds increased by 5.3% followed by the 15-24 year-olds at 5.2% and finally the 25-44 year-olds at 4.2%.

On an Aboriginal community basis, it was estimated that the total number of Registered Indians in Manitoba was 100,800 in 2001. In 2004 it was estimated to be 108,400. This was an increase of 7,600 persons, for growth of 7.5%. The Metis population was estimated to have grown by 2,500 persons between 2001 and 2004, from 54,000 to 56,500, which was an increase of 4.6%. In 2001, the Other Aboriginal population was estimated at 7,200. In 2004 it was estimated to be 7,800, an increase of 500 persons or 7.2%.

On a regional basis, the Aboriginal population of Winnipeg is projected to have grown by 4,300 persons or 7.9%, from 54,100 in 2001 to 58,400 in 2004 In the North, MBS projected an increase of 2,500 persons or 4.0% in the Aboriginal population between 2001 and 2004. As a result, the Northern Aboriginal population is estimated at 66,200 in 2004. The Southern region

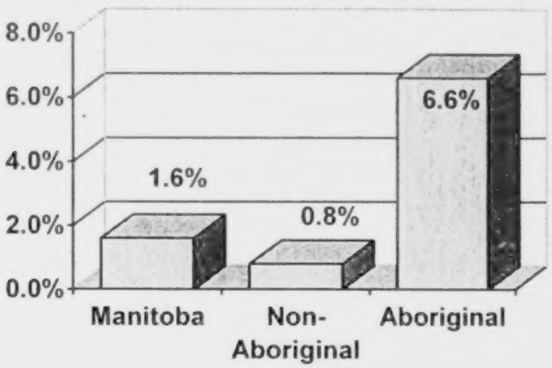
III. PROJECTED ABORIGINAL IDENTITY POPULATION

In this section of the report, the general results of the projections of Aboriginal communities in Manitoba are highlighted. In the first part a brief summary of the projected population growth between 2001 and 2004 is given. Following this, an analysis of projected growth from 2004 onwards is presented.

Projected Population Growth: 2001 to 2004

According to the Manitoba Bureau of Statistics, there were 162,000 Aboriginals living in Manitoba as of July 1, 2001. Between 2001 and 2004, the Aboriginal Identity population is estimated to have increased by 10,600 or 6.6% to 172,700. The total population of Manitoba was estimated to have increased by 1.6% over the same time period. When the projected population of 2004 is compared to the total Manitoba estimated population of 1,170,300 in 2004, Aboriginals comprised 14.8% of the population. This compares to 14.1% in 2001.

Population Growth: 2001 to 2004



As the Aboriginal population increased, it also became older due to increasing life expectancies. The median age of Aboriginals in 2004 was projected to be 23.6 years, 0.2 years older than in 2001. The median age of the non-Aboriginal population was 39.5 in 2004, nearly sixteen years older.

The strongest growth was projected to have occurred in the older age groups. From 2001 to 2004, the number of 55-64 year-olds is projected to increase by 18.8%, while 45-54 year-olds and those over 65 increased their numbers by 13.6% and 12.1% respectively. On the other hand, the projected number of 0-14 year-olds increased by 5.3% followed by the 15-24 year-olds at 5.2% and finally the 25-44 year-olds at 4.2%.

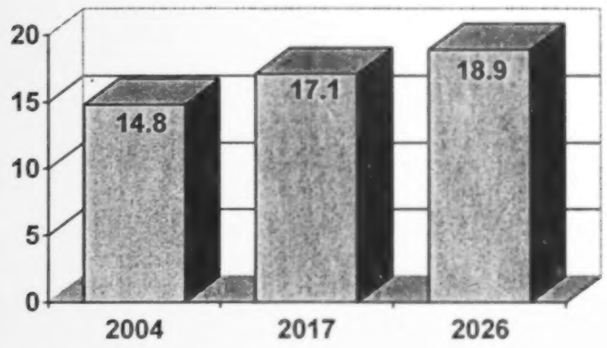
On an Aboriginal community basis, it was estimated that the total number of Registered Indians in Manitoba was 100,800 in 2001. In 2004 it was estimated to be 108,400. This was an increase of 7,600 persons, for growth of 7.5%. The Metis population was estimated to have grown by 2,500 persons between 2001 and 2004, from 54,000 to 56,500, which was an increase of 4.6%. In 2001, the Other Aboriginal population was estimated at 7,200. In 2004 it was estimated to be 7,800, an increase of 500 persons or 7.2%.

On a regional basis, the Aboriginal population of Winnipeg is projected to have grown by 4,300 persons or 7.9%, from 54,100 in 2001 to 58,400 in 2004 In the North, MBS projected an increase of 2,500 persons or 4.0% in the Aboriginal population between 2001 and 2004. As a result, the Northern Aboriginal population is estimated at 66,200 in 2004. The Southern region is projected to see their Aboriginal population grow from 44,300 in 2001 to 48,100 in 2004, for an increase of 3,800 persons or 8.6%.

Projected Population Growth: 2004 to 2017

The Aboriginal Identity population of Manitoba was estimated to be 172,700 as of July 1, 2004. Though the projection period is 2001 to 2026, a little over half of the growth occurs between 2004 and 2017. From 2004 to 2017, the population is projected to grow by 50,700 or 29.4% to 223,400. In comparison, the overall population of Manitoba is projected to grow by 11.4% between 2004 and 2017.

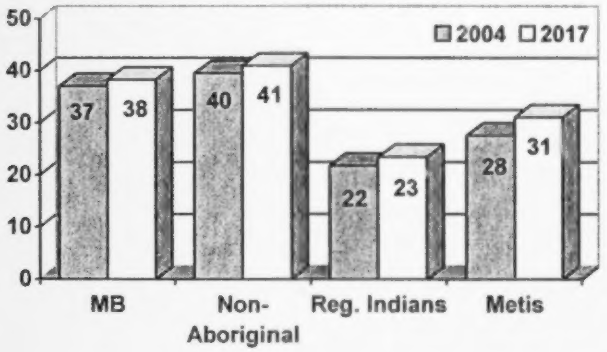
Aboriginal Share of Manitoba Population



In 2017, Aboriginals are expected to comprise 17.1% of the population, up from 14.8% in 2004.

Similar to the general population, the Aboriginal community is getting older. However, it is still relatively young when compared to the non-Aboriginal community. The combination of declining fertility rates and increased life expectancy are the main causes of the trend. But even though fertility rates are declining, they are still relatively high (compared to the non-Aboriginal population). This accounts for the large number of births and the resulting younger population.

Median Age by Population Group: 2004 and 2017



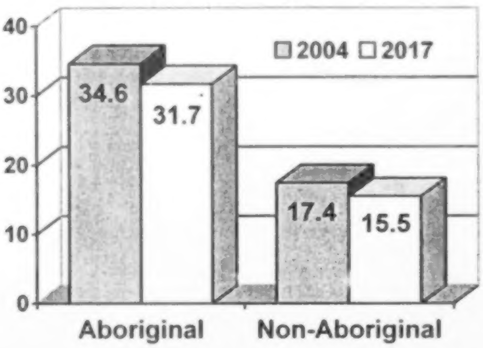
The median age of the total Aboriginal population was 23.6 in 2004. By 2017 it is projected to be 25.4. The Non-Aboriginal population is much older with median ages of 40 and 41 in 2004 and 2017 respectively.

It should be noted that there is considerable difference between groups within the Aboriginal community. The Metis community is considerably older than the Registered Indian group and is projected to age much more quickly. The Metis community is projected to record the greatest increase in median age, from 27.5 in 2004 to 31 by 2017. The Registered Indian population is projected to increase its median age from 21.7 in 2004 to 23.4 in 2017.

On a regional basis, Winnipeg and the South are projected to be noticeably older than the North. Winnipeg is projected to have the largest increase in median age, from 25.4 in 2004 to 27.5 in 2017, while the North is projected to record a much a smaller increase. The South will age similar to the Winnipeg region but not as quickly.

The number of Aboriginals 65 and over is projected to grow by 90.3% between 2004 and 2017. This is the largest increase, followed by 55-64 year-olds at 87.4% and 45-54 year-olds at 54.6%. The populations of the younger age groups are also projected to increase but not as substantially as the older age groups.

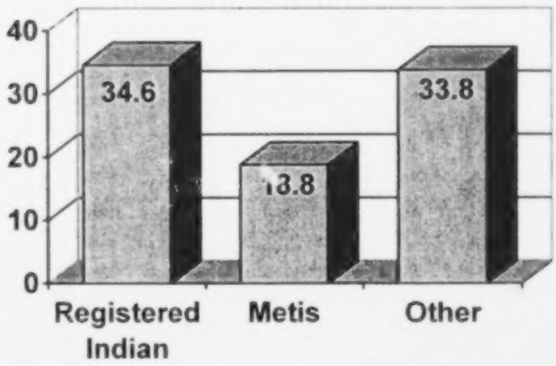
Percent Share of Population Under 15



However, even with the gains in the older age groups, the Aboriginal community still remains young. In 2004 the share of the Aboriginal population that was under 15 was projected to be 34.6%. In 2017, it is projected to be 31.7%. Persons over 65 are projected to make up 3.7% of the Aboriginal population in 2004 rising to 5.5% in 2017. In the non-Aboriginal community, children under 15 are projected to represent 15.5% of the population in 2017, down slightly from 17.4% in 2004. The share of persons over 65 years-old in the non-Aboriginal community is projected to be 17.3% in 2017, up from 15.2% in 2004.

On an Aboriginal community basis, the Registered Indian community is projected to have much stronger growth than the Metis community. This is mainly due to the lower total fertility rate of the Metis. In 2004, the total number of Registered Indians in Manitoba was 108,400 and this community is projected to be 145,900 in 2017, representing an increase of 34.6% or 2.3% per year.

Projected Population Growth: 2004 to 2017



When compared to the other two groups, the Metis are projected to record the smallest percentage growth. Between 2004 and 2017, an increase of 10,600 persons or 18.8% is projected. This is an average annual growth of 1.3%.

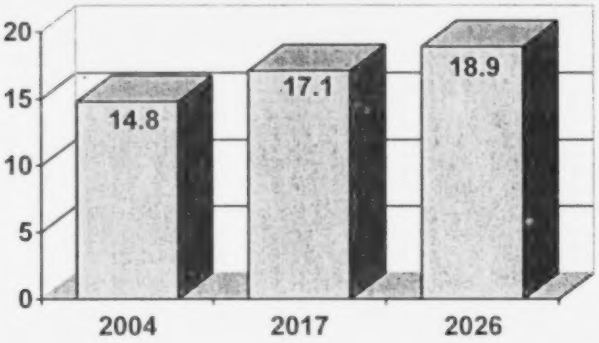
The Other, non-registered Aboriginal identity population is projected to record large percentage growth. However, this population is relatively small and therefore this growth does not have much effect on the total Aboriginal population. In 2004, the Other population is estimated at 7,800. It is to reach 10,400 by 2017, an increase of 33.8%.

is projected to see their Aboriginal population grow from 44,300 in 2001 to 48,100 in 2004, for an increase of 3,800 persons or 8.6%.

Projected Population Growth: 2004 to 2017

The Aboriginal Identity population of Manitoba was estimated to be 172,700 as of July 1, 2004. Though the projection period is 2001 to 2026, a little over half of the growth occurs between 2004 and 2017. From 2004 to 2017, the population is projected to grow by 50,700 or 29.4% to 223,400. In comparison, the overall population of Manitoba is projected to grow by 11.4% between 2004 and 2017.

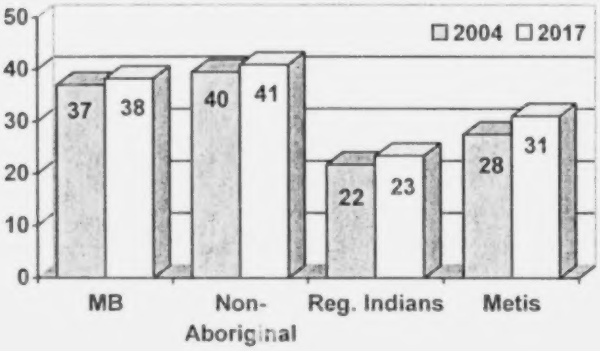
Aboriginal Share of Manitoba Population



In 2017, Aboriginals are expected to comprise 17.1% of the population, up from 14.8% in 2004.

Similar to the general population, the Aboriginal community is getting older. However, it is still relatively young when compared to the non-Aboriginal community. The combination of declining fertility rates and increased life expectancy are the main causes of the trend. But even though fertility rates are declining, they are still relatively high (compared to the non-Aboriginal population). This accounts for the large number of births and the resulting younger population.

Median Age by Population Group: 2004 and 2017

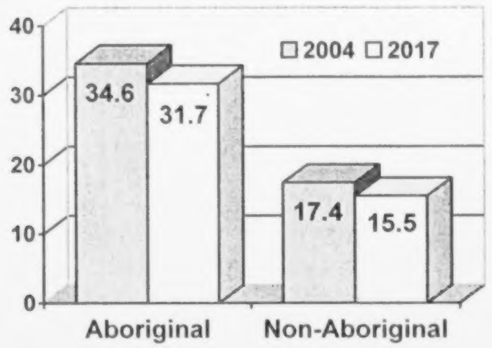


The median age of the total Aboriginal population was 23.6 in 2004. By 2017 it is projected to be 25.4. The Non-Aboriginal population is much older with median ages of 40 and 41 in 2004 and 2017 respectively.

It should be noted that there is considerable difference between groups within the Aboriginal community. The Metis community is considerably older than the Registered Indian group and is projected to age much more quickly. The Metis community is projected to record the greatest increase in median age, from 27.5 in 2004 to 31 by 2017. The Registered Indian population is projected to increase its median age from 21.7 in 2004 to 23.4 in 2017.

On a regional basis, Winnipeg and the South are projected to be noticeably older than the North. Winnipeg is projected to have the largest increase in median age, from 25.4 in 2004 to 27.5 in 2017, while the North is projected to record a much a smaller increase. The South will age similar to the Winnipeg region but not as quickly.

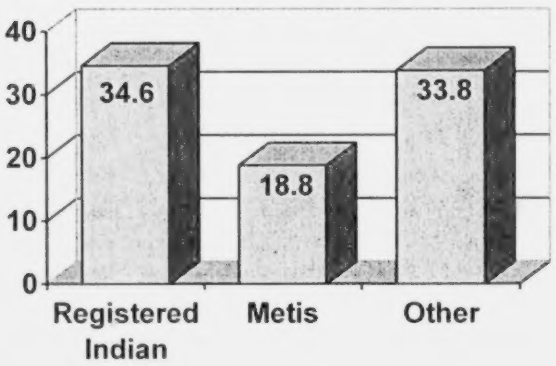
The number of Aboriginals 65 and over is projected to grow by 90.3% between 2004 and 2017. This is the largest increase, followed by 55-64 year-olds at 87.4% and 45-54 year-olds at 54.6%. The populations of the younger age groups are also projected to increase but not as substantially as the older age groups.



Percent Share of Population Under 15

However, even with the gains in the older age groups, the Aboriginal community still remains young. In 2004 the share of the Aboriginal population that was under 15 was projected to be 34.6%. In 2017, it is projected to be 31.7%. Persons over 65 are projected to make up 3.7% of the Aboriginal population in 2004 rising to 5.5% in 2017. In the non-Aboriginal community, children under 15 are projected to represent 15.5% of the population in 2017, down slightly from 17.4% in 2004. The share of persons over 65 years-old in the non-Aboriginal community is projected to be 17.3% in 2017, up from 15.2% in 2004.

On an Aboriginal community basis, the Registered Indian community is projected to have much stronger growth than the Metis community. This is mainly due to the lower total fertility rate of the Metis. In 2004, the total number of Registered Indians in Manitoba was 108,400 and this community is projected to be 145,900 in 2017, representing an increase of 34.6% or 2.3% per year.



Projected Population Growth: 2004 to 2017

When compared to the other two groups, the Metis are projected to record the smallest percentage growth. Between 2004 and 2017, an increase of 10,600 persons or 18.8% is projected. This is an average annual growth of 1.3%.

The Other, non-registered Aboriginal identity population is projected to record large percentage growth. However, this population is relatively small and therefore this growth does not have much effect on the total Aboriginal population. In 2004, the Other population is estimated at 7,800. It is to reach 10,400 by 2017, an increase of 33.8%.

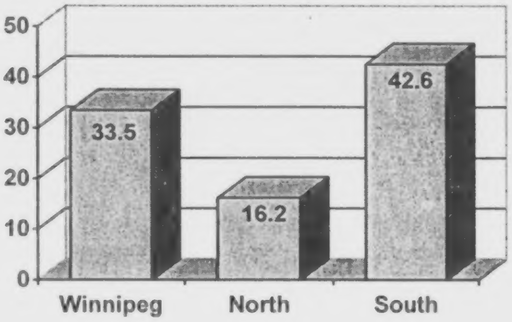
High fertility rates and increasing life expectancies are the main drivers of population growth for each of the Aboriginal groups. On a regional basis however, migration plays an important role in growth. The current trend of more people leaving the North for the South and Winnipeg is expected to continue. It was assumed that movement between the regions would result in positive net gains for the South and Winnipeg while the North would record net losses.

This assumption influences the projected change in the regional distribution of the Aboriginal population. In 2004, 33.8% of the Aboriginal population resided in Winnipeg, 38.3% lived in the North and 27.9% were in the South. In 2017, it is projected that 34.9% of the Aboriginal population will live in Winnipeg, 34.4% will be in the North and 30.7% will reside in the South.

The Aboriginal population of Winnipeg is projected to grow by 33.5% between 2004 and 2017 for an average annual increase of 2.3%. The total change in population is projected to be 19,500 persons, from 58,400 in 2004 to 77,900 in 2017. However, only a small increase in the Aboriginal share of the total Winnipeg population is projected, from 9.0% in 2004 to 10.6% in 2017.

In the North, a smaller increase is projected. The 2004 Aboriginal population is estimated at 66,200. The population is projected to reach 76,900 by 2017, for growth of 16.2% or an average annual increase of 1.2%. Although the increase is small when compared to other regions, the Aboriginal identity share of the total population in the North is projected to increase substantially, from 77.1% in 2004 to 84.7% in 2017. This increase is mainly due to out-migration from the North.

Projected Population Growth: 2004 to 2017



The Southern region is projected to record the largest percentage increase in the Aboriginal population. As in the other regions, the strongest growth is projected to occur between 2004 and 2017. The 2017 projected population is 68,600, an increase of 20,500 or 42.6% over the 2004 figure. This results in an average annual increase of 2.8%. In addition, the share of the total Southern population, that is Aboriginal, increases by 3.3 percentage points, from 11.1% in 2004 to 14.4% in 2017.

Projected Population Growth: 2004 to 2026

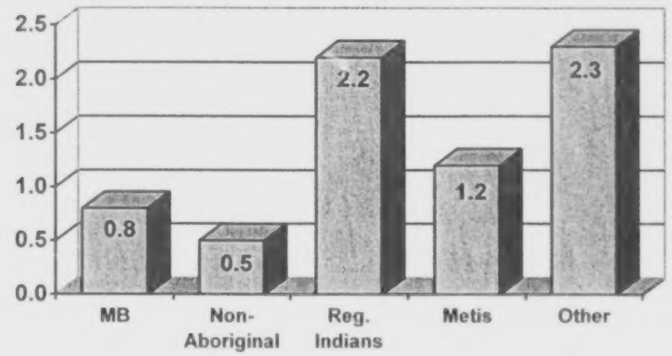
In 2026, the Aboriginal Identity population of Manitoba is projected to be 262,100, an increase of 89,400 or 51.8%. This represents an average annual growth of 1.9%. The total population of Manitoba is projected to grow 18.4% in the same time period for average annual growth of 0.8%. By 2026, it is projected that the Aboriginal community will form 18.9% of the total population of Manitoba.

The aging of the Aboriginal community continues throughout the latter half of the projection period. By 2026, 7.5% of Aboriginals will be 65 or older, up from 3.7% in 2004. The share of Aboriginals aged 55-64 will be 8.5% an increase of 3.2 percentage points over 2004. The percentage of 45-54 year-olds will also increase, from 9.1% in 2004 to 9.8% in 2026. The shares of the remaining age groups are all projected to decline.

Registered Indians will have the largest increase. In 2004, the total number of Registered Indians in Manitoba was 108,400 and in 2026 it is projected to be 176,100. This increase of 67,700 represents total growth of 62.5% or 2.2% on an annual average basis.

The Metis are projected to record the least amount of growth. This population will increase by 16,600 over the projection period, from 56,500 in 2004 to 73,100 in 2026. The total increase of Metis is 29.4% or 1.2% per year.

Average Annual Growth Rate: 2001 to 2026

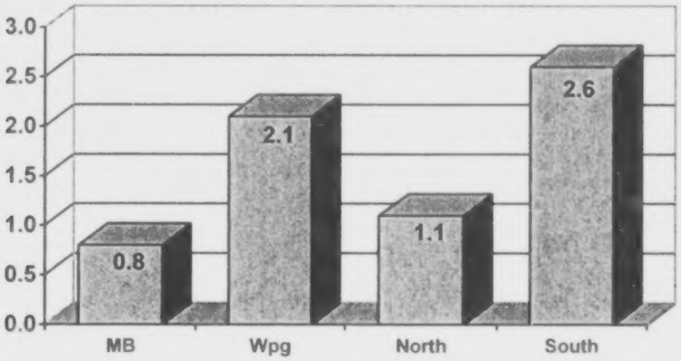


In 2004, the Other non-registered Aboriginal identity population is estimated at 7,800. In 2026 it is projected to grow by 5,100 or 65.5% to 12,900. This results in a total increase of 5,100 or 65.5% over the entire projection period. This community is expected to grow by 2.3% per year from 2004 to 2026.

On a regional basis, the Aboriginal population of Winnipeg is projected to grow by 33,800 or 58.0% over the projection period, from 58,400 in 2004 to 92,200 by 2026. This growth represents average annual increases of 2.1%.

In the North, MBS is projecting an increase of 18,400 persons or 27.8% in the Aboriginal population. The 2004 Aboriginal population is estimated at 66,200. The population is projected to reach 84,600 by 2026, for an average annual increase of 1.1%.

Average Annual Growth Rate: 2001 to 2026



The Southern region is projected to record the largest percentage increase in the Aboriginal population. The South is projected to see its Aboriginal population grow from 48,100 in 2004 to 85,300 in 2026. The increase of 37,200 translates to an average annual increase of 2.6%.

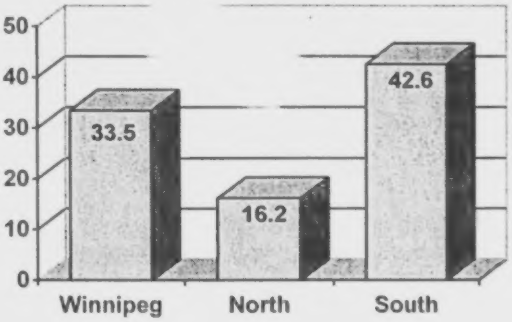
High fertility rates and increasing life expectancies are the main drivers of population growth for each of the Aboriginal groups. On a regional basis however, migration plays an important role in growth. The current trend of more people leaving the North for the South and Winnipeg is expected to continue. It was assumed that movement between the regions would result in positive net gains for the South and Winnipeg while the North would record net losses.

This assumption influences the projected change in the regional distribution of the Aboriginal population. In 2004, 33.8% of the Aboriginal population resided in Winnipeg, 38.3% lived in the North and 27.9% were in the South. In 2017, it is projected that 34.9% of the Aboriginal population will live in Winnipeg, 34.4% will be in the North and 30.7% will reside in the South.

The Aboriginal population of Winnipeg is projected to grow by 33.5% between 2004 and 2017 for an average annual increase of 2.3%. The total change in population is projected to be 19,500 persons, from 58,400 in 2004 to 77,900 in 2017. However, only a small increase in the Aboriginal share of the total Winnipeg population is projected, from 9.0% in 2004 to 10.6% in 2017.

In the North, a smaller increase is projected. The 2004 Aboriginal population is estimated at 66,200. The population is projected to reach 76,900 by 2017, for growth of 16.2% or an average annual increase of 1.2%. Although the increase is small when compared to other regions, the Aboriginal identity share of the total population in the North is projected to increase substantially, from 77.1% in 2004 to 84.7% in 2017. This increase is mainly due to out-migration from the North.

Projected Population Growth: 2004 to 2017



The Southern region is projected to record the largest percentage increase in the Aboriginal population. As in the other regions, the strongest growth is projected to occur between 2004 and 2017. The 2017 projected population is 68,600, an increase of 20,500 or 42.6% over the 2004 figure. This results in an average annual increase of 2.8%. In addition, the share of the total Southern population, that is Aboriginal, increases by 3.3 percentage points, from 11.1% in 2004 to 14.4% in 2017.

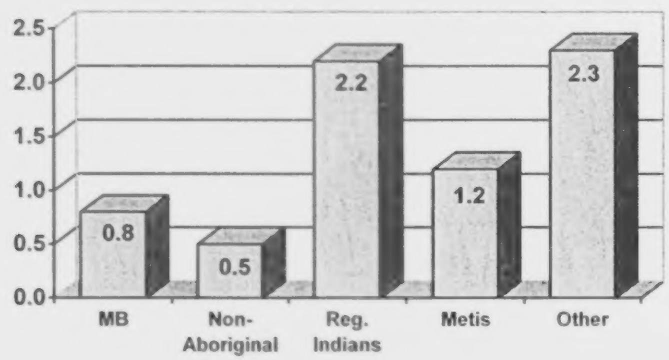
Projected Population Growth: 2004 to 2026

In 2026, the Aboriginal Identity population of Manitoba is projected to be 262,100, an increase of 89,400 or 51.8%. This represents an average annual growth of 1.9%. The total population of Manitoba is projected to grow 18.4% in the same time period for average annual growth of 0.8%. By 2026, it is projected that the Aboriginal community will form 18.9% of the total population of Manitoba.

The aging of the Aboriginal community continues throughout the latter half of the projection period. By 2026, 7.5% of Aboriginals will be 65 or older, up from 3.7% in 2004. The share of Aboriginals aged 55-64 will be 8.5% an increase of 3.2 percentage points over 2004. The percentage of 45-54 year-olds will also increase, from 9.1% in 2004 to 9.8% in 2026. The shares of the remaining age groups are all projected to decline.

Registered Indians will have the largest increase. In 2004, the total number of Registered Indians in Manitoba was 108,400 and in 2026 it is projected to be 176,100. This increase of 67,700 represents total growth of 62.5% or 2.2% on an annual average basis.

The Metis are projected to record the least amount of growth. This population will increase by 16,600 over the projection period, from 56,500 in 2004 to 73,100 in 2026. The total increase of Metis is 29.4% or 1.2% per year.

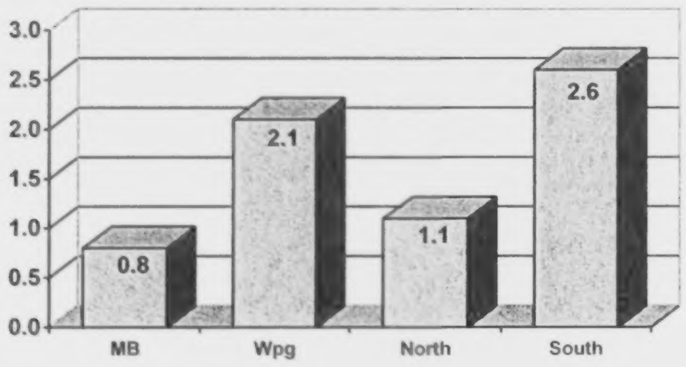


Average Annual Growth Rate: 2001 to 2026

In 2004, the Other non-registered Aboriginal identity population is estimated at 7,800. In 2026 it is projected to grow by 5,100 or 65.5% to 12,900. This results in a total increase of 5,100 or 65.5% over the entire projection period. This community is expected to grow by 2.3% per year from 2004 to 2026.

On a regional basis, the Aboriginal population of Winnipeg is projected to grow by 33,800 or 58.0% over the projection period, from 58,400 in 2004 to 92,200 by 2026. This growth represents average annual increases of 2.1%.

In the North, MBS is projecting an increase of 18,400 persons or 27.8% in the Aboriginal population. The 2004 Aboriginal population is estimated at 66,200. The population is projected to reach 84,600 by 2026, for an average annual increase of 1.1%.



Average Annual Growth Rate: 2001 to 2026

The Southern region is projected to record the largest percentage increase in the Aboriginal population. The South is projected to see its Aboriginal population grow from 48,100 in 2004 to 85,300 in 2026. The increase of 37,200 translates to an average annual increase of 2.6%.

IV. PROJECTED POPULATION COMPONENT ASSUMPTIONS

i) BIRTHS

This section presents the projected births for the Aboriginal population to the end of the projection period. For projection purposes, the number of births is determined by the number of females 15 - 49 years of age, the total fertility rate, and the age specific distribution of the total fertility rate.

Table 2 shows the projected total fertility rate for each Aboriginal community in 2001, 2004, 2017 and 2026. The total fertility rate was assumed to slowly decrease in all communities until 2017, and then become constant for the remainder of the projection period. This assumption takes into account that, although fertility rates have been declining in recent years, historically the fertility rates of Aboriginal women in Manitoba have generally been higher than the rates of non-Aboriginal women.

With these assumptions, the projected number of births is solely determined from the number of females in each age category between 15 and 49 years of age.

TABLE 2: PROJECTED TOTAL FERTILITY RATES BY ABORIGINAL COMMUNITY

Region	Aboriginal Group	2001	2004	2017	2026
Winnipeg	Registered Indian	3.11	3.07	2.91	2.91
	Metis	2.23	2.20	2.08	2.08
	Other Aboriginal	3.11	3.07	2.91	2.91
North	Registered Indian	3.71	3.66	3.47	3.47
	Metis	2.73	2.70	2.55	2.55
	Other Aboriginal	3.71	3.66	3.47	3.47
South	Registered Indian	3.51	3.47	3.27	3.27
	Metis	2.65	2.62	2.48	2.48
	Other Aboriginal	3.51	3.47	3.27	3.27

At the provincial level, the declining total fertility rate is more than offset by the increasing female population of child-bearing age. A steady increase in the annual number of births from 4,300 in 2001 to 6,000 by 2026 is projected.

The Registered Indian and the Other Aboriginal populations both have marked increases in the projected number of births. Births in the Registered Indian population are projected to increase by 1,400 per year or 46.7% over the 2004 level of 3,100 by 2026. Other Aboriginal births are also projected to steadily increase, from 190 in 2004 to 320 in 2026.

In contrast, births in the Metis population are projected to peak in 2011 at 1,200 and then slowly decline to 1,100 by 2024, after which they will increase slightly. This difference can be attributed to the lower fertility rates of the Metis population and its older age structure.

In all three regions the number of births per year is projected to grow over the projection period. Aboriginal births in the South are projected to increase the most, from a total 1,200 in 2004 to 1,900 in 2026, for a growth rate of 63.4%. Winnipeg is also projected to register a substantial increase in births, from a total of 1,400 in 2004 to 1,800 in 2026, up 33.3%. Births in the North are also projected to increase, though not as quickly as in the other regions. In 2004, the number of births was projected to total 1,900 and by 2026 it is projected to be 2,300, an increase of only 21.6%. A major factor for the slower increase in the number of births is the movement of people out of the North and into Winnipeg and the South.

Detailed information on the number of births by region can be found in Table B1 in Appendix B.

ii) DEATHS

This section presents the projected number of deaths for each of the Aboriginal communities. For projection purposes, the number of deaths is derived from the life expectancy at birth for each Aboriginal group.

From the life expectancy tables, survival rates by sex and single years of age were determined. These survival rates are then used as the probability of a person being alive at the start of the following year.

It was projected that the life expectancy for females of the Registered Indian and Other Aboriginal groups will increase 1.9 years by 2021, and then remain constant until the end of the projection period. In a similar manner, the life expectancy for males was assumed to increase by 2.9 years.

With respect to the non-registered Metis community, the life expectancy for females was projected to increase by 1.8 years, from 77.3 in 2001 to 79.1 in 2021, after which it remained constant until 2026. The life expectancy for males was expected to increase by 2.9 years, from 70.0 in 2001 to 72.9 in 2021, and then remain constant for the rest of the projection period.

TABLE 3: LIFE EXPECTANCY AT BIRTH BY ABORIGINAL GROUP AND REGION (In Years)

			2001	2004	2021	2026
Winnipeg, North and South	**Registered Indian**	**Male**	68.4	68.8	71.3	71.3
		Female	75.5	75.8	77.4	77.4
	Metis	**Male**	70.0	70.4	72.9	72.9
		Female	77.3	77.6	79.1	79.1
	Other Aboriginal	**Male**	68.4	68.8	71.3	71.3
		Female	75.5	75.8	77.4	77.4

The number of deaths in the total Aboriginal community is projected to increase by 101.1% or 750 deaths per year between 2004 and 2026. The number of deaths in each of the three Aboriginal groups is projected to grow in a similar manner.

The annual number of deaths in the Registered Indian population is projected to grow by 102.7% or 450 deaths per year, followed by projected increases of 99.6% (up 270) for the Metis population and 86.5% (up 30) for the Other Aboriginal population. The increase in the number of deaths reflects the changing age structure of the Aboriginal population. As the share of the population 65 and older increases so will the number of deaths. Between 2004 and 2026, the share of Aboriginals 65 and older is projected to increase from 3.7% to 7.5% respectively.

On a regional basis, deaths are also projected to increase but at varying rates. The Winnipeg region is projected to record the largest increase, from 240 deaths in 2004 to 570 by 2026, an increase of 330 deaths per year for growth of 141.5%. The North is projected to record a much smaller rise of 140 deaths per year (up 50.9%), from a total of 280 in 2004 to 420 by 2026. In the Southern region, the projected annual number of deaths in 2004 was 230. This compares to the 500 in 2026, an increase of 119.5%.

The regional differences are mainly due to variations between regional age distributions. For example, the share of Aboriginals 65 years and over in Winnipeg is projected to be 8.8% in 2026 while the same age group in the North is projected to be 6.1% of the Aboriginal population.

Detailed information on the number of deaths by region can be found in Table B2 Appendix B. In addition, natural increase (births minus deaths) by region can be found in Table B3.

MIGRATION

Migration, the third component of population growth, has little effect on the size of population growth at the provincial level. However, it does affect the projected concentration of Aboriginal groups within each of the regions.

In these projections two types of migration were considered; intraprovincial and interprovincial. Intraprovincial migration is the movement persons within Manitoba, while interprovincial migration is the movement of persons to and from other provinces. It should be noted that international migration was not included in these projections. Information regarding this type of migration for the Aboriginal population is extremely limited and was believed to be negligible.

The data presented are based on estimates of the regional migration distributions for the five year period July 1998 to June 2003. Each projected regional distribution was calculated by averaging its historical percentage distribution over the five year period July 1998 to June 2003. The final data for the projection period was then calculated from the regional distribution and the projected Manitoba level for each component.

iii) INTERPROVINCIAL MIGRATION

Information regarding interprovincial movements of the Aboriginal community is limited and therefore difficult to measure and project. As a result, MBS has assumed that interprovincial movement will remain constant for the entire projection period.

Table 4 shows the projected interprovincial movement of each Aboriginal group by region over the entire projection period. As can be seen, the effect of interprovincial migration on population growth is negligible.

TABLE 4: INTERPROVINCIAL MIGRATION 2001 TO 2026

		In-Migrants	Out-Migrants	Net
	Registered Indians	260	190	70
Winnipeg	Metis	190	220	-30
	Other Aboriginal	60	40	20
	Registered Indians	150	220	-70
North	Metis	60	80	-20
	Other Aboriginal	10	40	-30
	Registered Indians	150	220	-70
South	Metis	120	80	30
	Other Aboriginal	60	40	20
	Total	1,070	1,150	-70

At the provincial level, net migration is projected to be -70 persons for the entire projection period. Regionally however, Winnipeg is projected to record a net gain in Aboriginals from other provinces while the North and South are projected to experience net losses. Nevertheless, in all three cases the number is small and it's effect on population growth is therefore limited.

Detailed information on net interprovincial migration by region can be found in Table B4 Appendix B.

iv) INTRAPROVINCIAL MIGRATION

The intraprovincial migration assumption, movements within Manitoba, is based on historical regional trends. Table 5 shows the assumptions made for intraprovincial migration of Aboriginal persons over the projection period.

Intraprovincial migration was assumed to increase until 2017 and then remain constant until 2026. Winnipeg and the South are assumed to observe net gains while the North was assumed to record net losses throughout the projection period.

TABLE 5: Intraprovincial Migration by Region

	Manitoba	Winnipeg		North		South	
	Total	In	Out	In	Out	In	Out
2001-02	4,500	1,300	1,000	2,100	2,700	1,200	800
2002-03	4,600	1,300	1,100	2,100	2,800	1,200	800
2003-04	4,700	1,300	1,100	2,200	2,800	1,200	800
2004-05	4,800	1,300	1,100	2,200	2,900	1,200	800
2005-06	5,000	1,400	1,100	2,300	3,000	1,300	900
2006-07	5,100	1,400	1,200	2,300	3,000	1,300	900
2007-08	5,200	1,400	1,200	2,400	3,100	1,300	900
2008-09	5,300	1,500	1,200	2,500	3,200	1,400	900
2009-10	5,400	1,500	1,200	2,500	3,200	1,400	900
2010-11	5,500	1,500	1,200	2,600	3,300	1,400	1,000
2011-12	5,600	1,500	1,300	2,600	3,400	1,500	1,000
2012-13	5,700	1,600	1,300	2,700	3,400	1,500	1,000
2013-14	5,800	1,600	1,300	2,700	3,500	1,500	1,000
2014-15	5,900	1,600	1,300	2,800	3,600	1,600	1,000
2015-16	6,100	1,700	1,400	2,800	3,600	1,600	1,100
2016-17	6,200	1,700	1,400	2,900	3,700	1,600	1,100
.	.	.	.	.	.	.	.
.	.	.	.	.	.	.	.
.	.	.	.	.	.	.	.
2025-26	6,200	1,700	1,400	2,900	3,700	1,600	1,100

It should be noted that the sum of the three regional in and out intraprovincial migration flows add to the Manitoba level. The net intraprovincial migration at the provincial level is zero.

Intraprovincial flows between the three Manitoba regions are projected to be increase steadily from 4,500 in 2001 to 6,200 by 2017 after which it will remain constant until the end of the projection period.

The North is projected to have a significant net intraprovincial outflow for the entire projection period, with an average annual net loss of -700. In contrast, Winnipeg and the South are projected to average net annual gains of 300 and 500 persons per year respectively over the projection period.

Detailed information on net intraprovincial migration by region can be found in Table B5 Appendix B.

APPENDIX A

2001 BASE POPULATION DETERMINATION

2001 BASE POPULATION DETERMINATION

The 2001 Census was the starting point for the base population for the projections. Statistics Canada provided a requested breakdown by age, sex and Aboriginal Identity group for each of the three regions as of May 15, 2001. However, the Manitoba Bureau of Statistics (MBS) estimated that approximately 11,300 Aboriginals were missing from this population due to the combination of undercoverage in the 2001 Census and the unenumerated Indian Reserve of Dakota Tipi.

Table 1: 2001 Base Population Adjustment

	2001 Census May 15, 2001	MBS Adjusted Population as of May 15, 2001	Difference	Percent Change
Total Aboriginal Population	150,040	161,421	11,381	7.6%

Data Source: Statistics Canada and Manitoba Bureau of Statistics

In order to account for these missing persons, the population was adjusted upwards. Several steps were taken to adjust the population. Firstly, the entire Aboriginal base population was increased by applying the Manitoba level undercount rates by age and sex to each of the Aboriginal communities. This process added about 4,000 people to the Aboriginal base population.

Secondly, 110 Registered Indians were added to the Southern Region to account for the population of Dakota Tipi, the one Indian Reserve in Manitoba which refused to take part in the Census. The figure of 110 was distributed according to the age and sex distribution of Registered Indians in the Southern region.

Thirdly, 1,467 Registered Indians were added to the Northern Region to account for the community of Cross Lake. In the 2001 Census there was difficulty enumerating the Indian Reserve and as a result it was estimated that 1,467 persons were not counted. This figure was distributed according to the age and sex distribution of Registered Indians in the Northern region.

Next, 5,789 Registered Indians were then added to the Northern and Southern regions to account for the number missed on enumerated Indian Reserves. Only the Registered Indian population was adjusted since it was assumed that the majority of residents on Reserves are Registered Indians. The figure of 5,789 was distributed according to the age and sex distribution of missed Manitobans in the 2001 Census. Winnipeg was not included in this adjustment because there are no Indian Reserves in the community.

And finally, the population was moved forward to July 1, 2001 to make it consistent with other population projections. This process added about 600 people to the Aboriginal base population.

The final result of these adjustments was an estimated total of 162,039 Manitoban's identifying as Aboriginal as of July 1, 2001. See table 2 for a breakdown by community.

Table 2: Population as of July 1, 2001

	2001 Census	MBS Adjusted May 15, 2001	MBS Adjusted July 1, 2001
Total Aboriginal Identity	150,040	161,421	162,039
By Region			
Winnipeg	52,465	53,869	54,075
North	55,980	63,388	63,631
South	41,595	44,163	44,333
By Aborignal Identity Group			
Registered Indian	90,650	100,441	100,826
Non-Registered Metis	52,360	53,761	53,967
Other Non-Registered Aboriginal	7,030	7,218	7,246

Data Source: Statistics Canada and Manitoba Bureau of Statistics

The adjustments not only increased the Aboriginal population, it also affected the population distribution. On a provincial basis, the share of Manitoban's identifying as Aboriginal increased from 13.6% in the 2001 Census to 14.1% after the adjustments made by MBS. On a regional basis, the greatest increase was observed in the North. According to the 2001 Census 68.2% of all Northerners identified as Aboriginal, after the adjustment by MBS this share increased to 75.0%. Winnipeg and the Southern region recorded smaller changes.

These adjustments also created a shift in the age distribution of the Aboriginal population. Most notable was an increase in the share of Aboriginals that were 25 to 34 years old. In addition, those aged 15 to 24 also increased their share. However, those Aboriginals under 15 and over 45 saw a decrease in their share of the total Aboriginal population.

In summary, the population adjustment served to increase the total Aboriginal population by 11,381. This adjustment reflected the estimated number of Aboriginals missed or not enumerated in the 2001 Census.

The following charts highlight the adjustments and comparisons with the 2001 Census counts.
